Dear Phillip,

GE Oil & Gas would like to thank TECHMETALS for their diligence to persevere in delivering a difficult plating project.

The TECHMETALS Team that engineered and executed plating of the Qinghai 250XXL seal bores without disturbing the [REDACTED] coating is to be commended for their exemplarily determination to get the job done in a compressed cycle.

The plating process showed minor porosity that did not clean up in finish machining; however, these were minute and not in critical areas.

The compressor casings have been assembled, tested & in the final packaging stage before shipping to GE Oil & Gas' customer.

Again, I would like to thank the TECHMETALS Team involved in delivering this difficult project in a timely manner with acceptable results.

Best Regards,

[Sourcing Agent]
